

Please note before updating:

This AbaClient 3.0 only supports Abacus versions from Version 2019 onwards. Older Abacus installations can no longer be started with this client.

Release notes:

- The compatibility mode has been removed for security reasons. This means that Abacus versions prior to v2019 can no longer be launched.
- Support for older JNLP files has been removed.
- There is now the possibility to subscribe to the beta channel. This allows you to obtain new versions of AbaClient even before the official delivery. These beta versions are tested beforehand and only enter the beta channel when the basic tests have been successfully passed.

Despite these basic tests, they are still open beta versions. In these open beta versions, individual functions may not yet be implemented. In addition, with such versions there is still a residual risk of malfunction during use.

- Java 17 is now also supported.
- The Chromium Browser integrated in AbaClient has been updated to version v7.29.
- In order for AbaClient to accept SelfSigned certificates, these must be explicitly activated. In the new default SelfSigned certificates are deactivated. An update will not overwrite the current setting.
